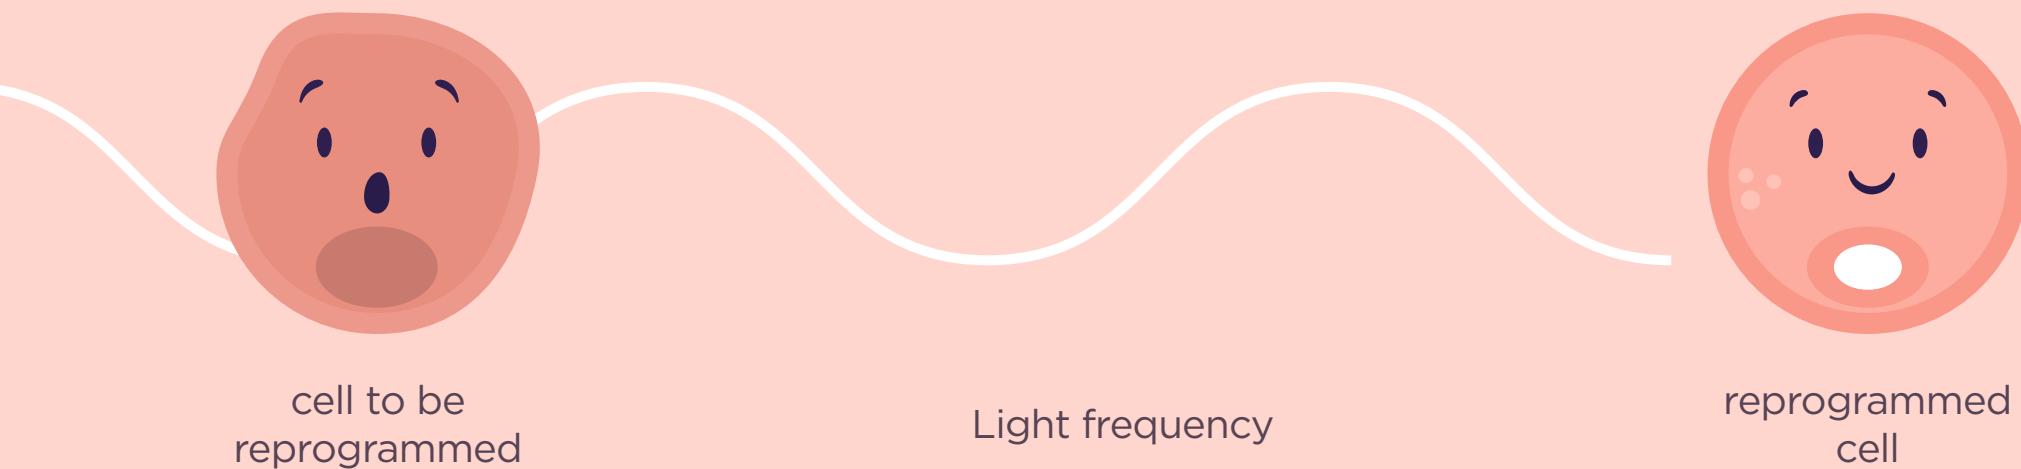

Photobiomodulation

Once the cells have been nourished with Bubble Drinks it is essential to reprogram their activities to obtain specific results. This reprogramming occurs through photobiomodulation.

Photobiomodulation

Photobiomodulation is based on the communication between light energy and cells. All cells are able to absorb light, and the effect of such light communication will be different according to different frequencies of light waves.

Photobiomodulation

Photochemical effect, not photothermal

ATHERMIUM

SUITABLE
FOR ALL

EVEN ON
FRAGILE SKIN

WITHOUT
SEASONAL LIMITS

Photobiomodulation acts in athermia so tissues are not overheated and/or damaged. The treatment is suitable for everyone, has no contraindications, and can be performed in any season, even in cases of capillary fragility and/or skin sensitivity.
